

VA - VD

WATER MANOMETERS

The water manometers **VA** and **VD** series are used for accurate adjustment of vacuum values in the suction in interventions of gastric and chest drainage.

The devices are made essentially of a cylinder head manufactured in anodized aluminum in which a needle valve acts for suction rate adjustments, and where a primary polycarbonate tube containing the water gets the function of measurement and calibration. Inside the tube, a graduated dipstick having scale up to 40 cm (**VA/600** and **VD/600**) or up to 70 cm (**VA/1000** and **VD/1000**) is used to adjust the hydraulic head necessary for the treatment. The **VD** series has also a secondary tube for fine adjustment of hydraulic head values, and, consequently, of the suction value, up to a maximum value of 5 cm.
